Complete Research Study using the charts for 368 Religious Figures

This research was done using Air Software's Astro Investigator Research Software.

Please note that for this research we have used the natal charts for priests, monks, friars, brothers, nuns, popes, bishops, saints, ministers and other clergymen and clergywomen.

We employed the Placidus house system with modern rulers and used the mean node.

This research was conducted according the scientific principles of research, using the chi square and R test and random control groups.
