

# WEATHER FORECASTING RESEARCH PART V SUNSHINE

by Alphee Lavoie 5/12/15

C.C. Zain found the signs that the moon and its dispositor are in are both extremely important in predicting the weather. He also found that the signs on the cusp of the IC and of the ascendant and their rulers are also important as well as the house placement of those two planets.

Dispositor of the moon in Virgo chi-square 8 probability 99% often

The moon in Virgo chi-square 2.7 probability 90.0 % often

The moon in earth sign chi-square 2.3 probability 87.3% % often

Dispositor of the ascendant in Virgo chi-square 7.2 probability 99.3% often

Dispositor of the IC located in Gemini chi-square 3.9 probability 95.1% often

The ascendant in earth sign chi-square 2.2 probability 86.3% often

The ascendant in mutable sign chi-square 1.6 probability 79.1% often

Ascendant in fire sign chi-square 4.9 probability 97.2% often

The moon the fourth house chi-square 2.5 probability 89.9% often

The sun in the fourth house chi-square 5.7 probability 98.3% often

Dispositor of the IC Ptolemy aspects to Uranus chi-square 5.8 probability 98.4% often

The IC in a sign of Aquarius chi-square 2.6 probability 89.4 often

Uranus oppose the IC chi-square 5.6 probability 97.5% often

Uranus conjuncting the ascendant chi-square 4.0 probability 95.4% often

The moon in the sign Scorpio chi-square 2.8 probability 90.9% seldom

The moon in the first house chi-square 2.3 probability 87.3% seldom

The moon in water sign chi-square 3.4 probability 93.4% seldom

The ascendant and the moon in Pisces chi-square 2.3 probability 86.9% seldom

The ascendant in in air sign chi-square 2.8 probability 90.6% seldom

Saturn, Uranus and Neptune in the 10th house would a probability over 95% often

Saturn in the fourth house chi-square 4.4 probability 96.5% seldom

The moon in the MC chi-square 3.6 probability 94.2% seldom

The moon in the first house chi-square 2.3 probability 87.3 seldom

The sun in the midheaven chi-square 3.4 probability 93.6 seldom

## Conclusion:

When the moon, the ascendant and the dispositor of the moon are in the sign of Virgo there are more sunshine days. This is also true if the moon is in an earth sign and the ascendant is in a mutable sign. If the sun and moon are in the fourth house, it brings more sunshine days. The sign of Aquarius and the planet Uranus have a lot to do with sunshine. When the planet Uranus makes an aspect to the moon, the ascendant, or the IC there are more sunshine days. Also the sign of Aquarius on the ascendant, IC and the dispositor of these points also bring more sunshine. If the moon, the ascendant, the IC and its

dispositor are in water sign it takes away sunshine days.
