

RESEARCHING MARS, ITS SIGN, ARIES AND THE FIRST HOUSE IN THE BIRTHCHARTS OF PEOPLE WHO COMMITTEED SUICIDE

By Steven Zimmerman August, 2014

ABSTRACT

This research attempts to determine the connection of the planet Mars, its sign of Aries and or the first house in the natal chart of natives who have committed suicide.

INTRODUCTION

The research utilized as many individual facets of analysis as possible. Only some of them proved to be significant, but to have reached any statistically profound results at all, speaks loudly for itself and thus for Astrology. The analysis used nearly a thousand criteria looking for relationships that exceeded normal or average correlation in the birth charts of people who committed suicide. This study write up is used in conjunction with the spreadsheet entitled Mars Suicide Research Results.

METHODOLOGY

We collected a total of 563 birth charts of people that committed suicide. We used the Astro Investigator Fast research software, designed and written by AIR Software to do our research. (www.alphee.com)

The criteria for our research model, included, but were not limited to Mars: in each sign, each house, major aspects 10 degree orb, minor aspect 4 degree orb, 4th harmonic, 6th harmonic, if it is intercepted, retrograde, rising before the Sun or Moon, conjunct an angle, phases, speed aspects to planets in the first house, aspects to the ruler of the first house, out of bounds,, all midpoints aspects to Mars and Mars in any of the four hemispheres. Also included in the research were the vertex and Nodes.

RESULTS

Using a minimum chi square of 3, out of nearly a thousand astrological events, 110 were significant. Of those, 42 had a high probability of occurring often, 68 seldom. 72 involved midpoint aspects. There was no high probability of any specific planet aspect to Mars, the highest being Mars and Neptune, but it was limited to 4 occurrences.

CONCLUSION

No single astrological criterion, based on Mars, its signs and houses points toward a propensity to suicide. Although there were 64% of the results involved midpoints to Mars, there were no planet pairs that stood out. 9 involved Pluto, 12 Neptune and 13 Uranus. Accompanying data spreadsheet here.
